Ponti

Acquedotti

Con sequenze chilometriche di archi sono stati realizzati **acquedotti** in grado di portare l'acqua da distanze enormi (e molti sono ancora in funzione come quello di Segovia).

Sempre con archi e volte sono state realizzate immense **cisterne sotterranee** per la conservazione dell'acqua convogliata dagli acquedotti.

Terme

Con l'arco e la volta sono state create infrastrutture molto innovative come le **fognature** (è celebre la **Cloaca maxima** di Roma).

Spazi urbani – La basilica

Roma, Foro Romano. Basilica Fulvia-Emilia, 179 a.C., ricostruita nel 14 a.C. e nel 22 d.C.

Roma, Foro Romano. Basilica Giulia, 54 a.C.-12 a.C., restaurata nel 283 d.C.

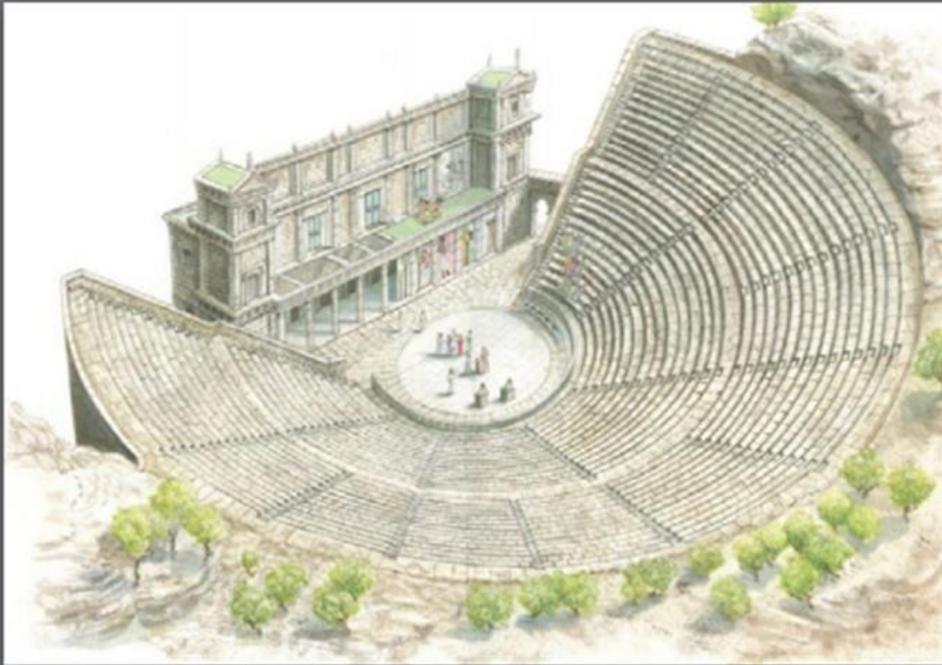

Fin dall'età repubblicana sorgono le prime **basiliche civili**, edifici a **pianta rettangolare** da cui deriveranno le basiliche paleocristiane dove si **amministrava la giustizia** e si **trattavano gli affari**. Generalmente lo spazio è suddiviso da colonnati in tre "navate" longitudinali e su uno dei lati maggiori era presente spesso un'**abside** semicircolare dove era collocato lo scranno del giudice.

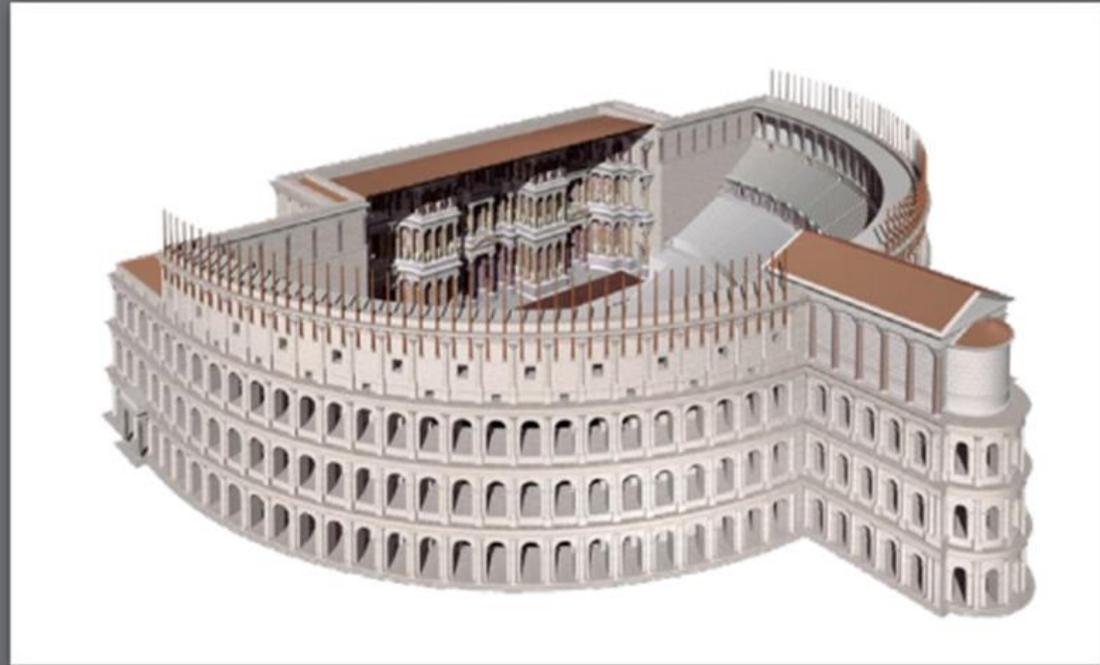

Le maggiori basiliche romane di questo periodo sono quella **Emilia** e quella **Giulia** realizzate nel foro Repubblicano.

Mentre i Greci addossavano a degli “imbuto” naturali la cavea del loro teatro, i Romani, grazie all’uso dell’**arco disposto in sequenza**, potevano realizzare anche teatri completamente **emersi** dal terreno, quindi anche in pianura.

La struttura interna non cambia molto ma si aggiunge una **scaena frons grandiosa** e scenografica. L’esterno ha un **andamento curvo** ad arcate sovrapposte e ben ritmate.

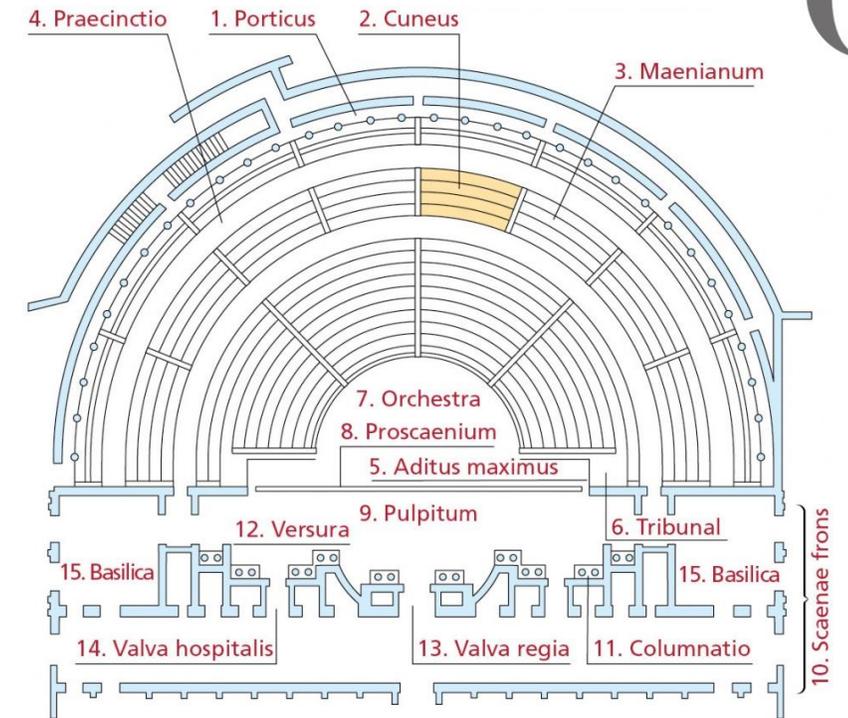

teatro greco

teatro romano

Romani – Età repubblicana

Teatri

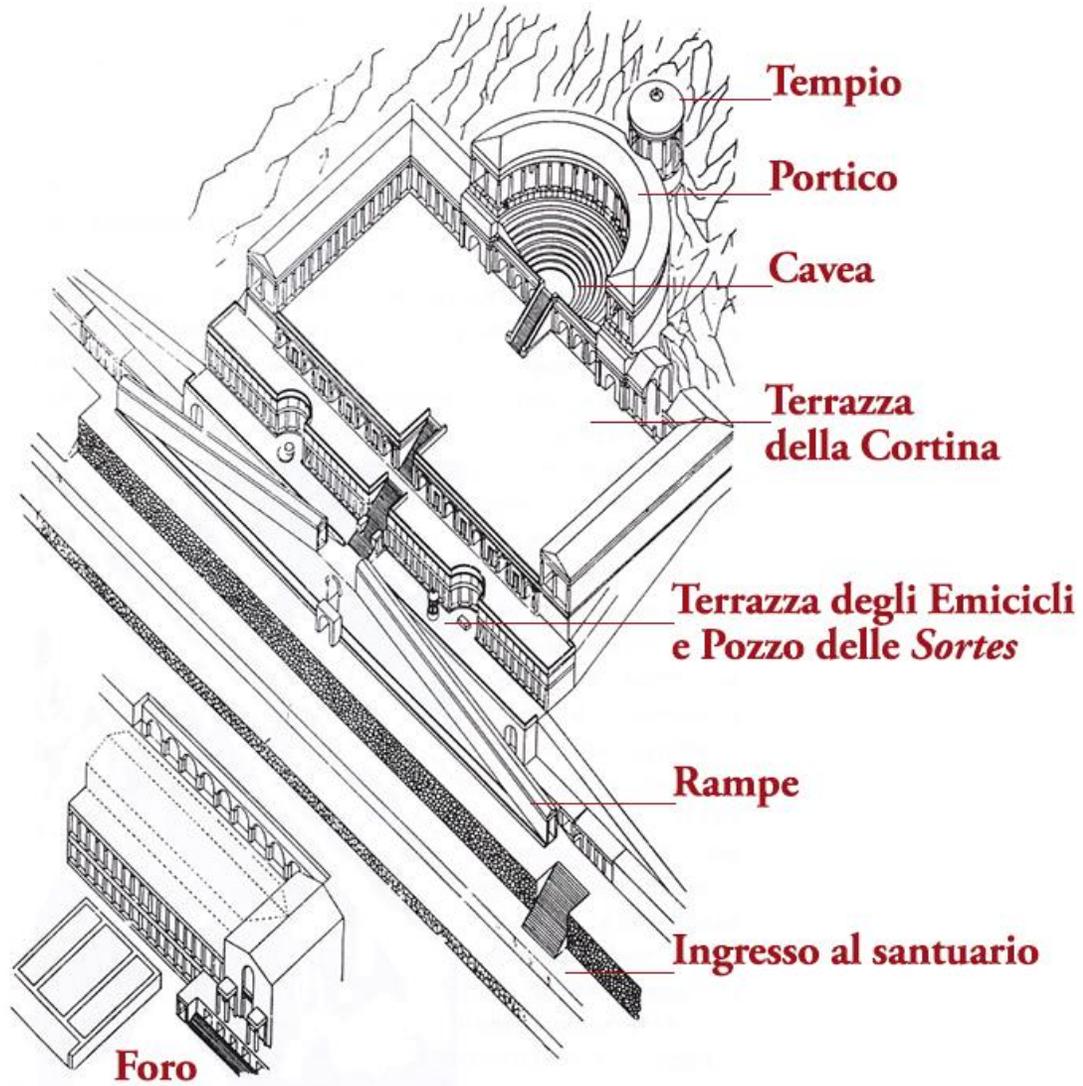

Nel **teatro di Marcello** gli archi sono affiancati da **semicolonne** i cui ordini architettonici seguono una sequenza che diverrà poi standard e cioè **tuscanico-ioni-co-corinzio** (andando verso l'alto.)

Il teatro Marcello ha perso l'ultimo ordine quando fu costruito **Palazzo Orsini** sulle sue strutture.

Santuari

Santuario della fortuna Primigenia a Palestrina

La domus, tipica casa patrizia, si apre intorno ad un **atrium** con un bacino quadrangolare per la raccolta delle acque piovane (**impluvium**) coperto da quattro falde spioventi verso l'interno (**compluvium**).

Intorno sono i **cubicoli**, gli alloggi. In fondo all'atrium si trova il **tablinum**, luogo rappresentativo della casa. Da qui si passa all'**hortus**, giardino circondato da colonne (**peristilium**).

Accanto al tablinum si trova il **triclinium**, la sala da pranzo, con lettini accostati ai lati del tavolo.
